We are currently facing the most critical environmental issues in human history. Our climate, planet, lives and future, as an civilization are all at risk. Potentially dangerous chemicals can be found in every room in our home. Many household chemicals are toxic and are a major cause of poisoning in children and pets.

A growing number of potentially chemicals have been incorporated into an expanding range of domestic household product and are sold worldwide. Environmental problems are complex and multidisciplinary. Solutions of Environmental Problems cause bring together students, faculty, staff and community partners in discussion and action to advance sustainability. In this report the author shows what we can do to help restore ecological balance to this amazing place we call home.

**key words:** Environment, Ecology, Household Chemical
