With the given huge flow of information for large corporate organizations, accurate information analysis is important for day-to-day management. Despite the popularity of unstructured data, structured databases are still relevant. Based on the example of concrete medical corporations, the paper discuss a structured database administration scenario for dealing with tasks that are critical to the successful operation of the corporation. Information about them is obtained on a continuous basis. Examples of data analysis scenarios in SQL Database and visualization of results using Power BI is provided.

Keywords: Data Vizualization, Data Manipulation
